Lab-03 Checklist

Before

- [ ] I am using only supplied mock data.
- [ ] I confirmed the tool URL and training scope.
- [ ] I will stop if the environment differs from the instructions.

During

- [ ] Step 1: Review each endpoint alert without opening or executing any referenced file.
- [ ] Step 2: Map the observable behaviour to a likely malware category: ransomware, trojan, spyware, worm, bot or rootkit.
- [ ] Step 3: Separate evidence from inference; identify what additional safe telemetry would confirm the hypothesis.
- [ ] Step 4: Build a short attack chain from initial access through execution, persistence and command-and-control.
- [ ] Step 5: Choose containment actions that preserve evidence and avoid spreading the infection.
- [ ] Step 6: Prepare a concise escalation note using who, what, when, where, impact and action already taken.

Before submission

- [ ] Malware classification
- [ ] Attack-chain map
- [ ] Evidence vs inference notes
- [ ] Containment decision
- [ ] Escalation note
- [ ] Screenshots are redacted and contain no real personal or secret data.
- [ ] My conclusion distinguishes fact from inference.
