Lab-04 Checklist

Before

- [ ] I am using only supplied mock data.
- [ ] I confirmed the tool URL and training scope.
- [ ] I will stop if the environment differs from the instructions.

During

- [ ] Step 1: Review each vulnerability together with asset owner, internet exposure, data sensitivity and operational criticality.
- [ ] Step 2: Use the simulator only in its authorised training environment to observe how attack preconditions change risk.
- [ ] Step 3: Calculate risk as likelihood × impact, then adjust the score for active exploitation, reachability and control strength.
- [ ] Step 4: Rank the vulnerabilities and state why severity alone does not determine business priority.
- [ ] Step 5: Select a treatment: patch, isolate, disable, add a compensating control, accept temporarily or retire the asset.
- [ ] Step 6: Set an owner, due date and verification method for the top three actions.

Before submission

- [ ] Ranked risk register
- [ ] Top-three rationale
- [ ] Treatment decisions
- [ ] Owners and due dates
- [ ] Verification plan
- [ ] Screenshots are redacted and contain no real personal or secret data.
- [ ] My conclusion distinguishes fact from inference.
