Lab-06 Checklist

Before

- [ ] I am using only supplied mock data.
- [ ] I confirmed the tool URL and training scope.
- [ ] I will stop if the environment differs from the instructions.

During

- [ ] Step 1: Classify each mock data item by sensitivity and identify whether confidentiality, integrity or both are required.
- [ ] Step 2: Use the toolkit to hash two similar messages; compare the outputs and explain the avalanche effect.
- [ ] Step 3: Encrypt one mock record with a training-only key, then decrypt it and verify accuracy.
- [ ] Step 4: Explain why encryption keys must be separated from encrypted data and why hashing is not reversible encryption.
- [ ] Step 5: Design a key-handling checklist covering creation, storage, sharing, rotation, backup and destruction.
- [ ] Step 6: Remove any locally copied training secret after evidence capture; never enter real personal or business secrets.

Before submission

- [ ] Data classification
- [ ] Hash comparison
- [ ] Encrypted/decrypted sample
- [ ] Key-handling checklist
- [ ] Security explanation
- [ ] Screenshots are redacted and contain no real personal or secret data.
- [ ] My conclusion distinguishes fact from inference.
